

## The Pro Pak Vac<sup>®</sup>

Distinctive ergonomic design with labor-saving productivity.

### Revolutionary Cleaning

The revolutionary, easy-to-use Pro PAC and Super Pro PAC backpack vacuums are essential for cleaning operations and provide a cost-effective and efficient alternative to traditional upright vacuum cleaners. With low sound levels, these units are ideal for cleaning in hospitals, schools, commercial offices, department stores, and institutions. Cleaning tasks from vacuuming carpets and hard floors, low and high dusting, to detail work, are handled with ease by these units.

### Attention to Air-Quality

Both the 6-quart Pro and the 10-quart Super Pro are outfitted with quad-filtration to address today's concerns for Indoor Air Quality (IAQ). Reducing and minimizing dust particles and contaminants is

critical to healthy buildings and should concern every building manager. While vacuuming is an extremely effective tool in removing potential allergens, use of the wrong machine can actually reintroduce them back into the air. Tornado's<sup>®</sup> Pro PAC VACs<sup>®</sup> safely capture and contain these harmful particles.

### Minimal Service Needs

With 1.5 HP, Tornado<sup>®</sup> PAC VACs<sup>®</sup> achieve static lift of 100 in. and airflow of 150 CFM at a quiet 67 decibels. PAC VACs<sup>®</sup> will recover paperclips and other debris that upright vacuum cleaners often struggle with, and they have a lower cost of ownership over the life of the product when compared to upright vacuum cleaners, thanks to minimal service requirements.

**And it's only from Tornado.**

# Pro Pak Vac® Backpack Vacuums. The essential cleaning tool with quad-filtration.

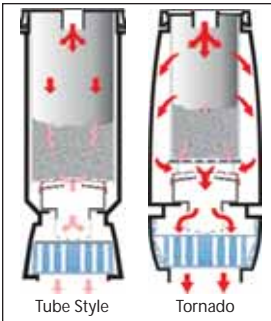

SUPER PRO PAC VAC®

PRO PAC VAC®

## Lightweight and durable housing

Designed to fit operators of any build securely and comfortably, the Pro (9 lbs.) and Super Pro (10.5 lbs.) eliminate the need to bend over, as with upright vacs. More area is covered with less effort.

## Unique Design

Airflow is critical in backpack vacuums. In typical tube style designs, the bag hugs the tube wall and rests directly on the vac motor, which must draw air through the debris field. The more dirt the unit collects, the less effective it becomes. Tornado's unique and patented solution in the Pro and Super Pro Vacs is a ribbed and tapered body that allows airflow around the filter bag, along with a standoff between the bottom of the bag and the motor, maintaining superior performance throughout the fill cycle.

## Smart construction

PAC VACs® feature slim, rotationally molded bodies designed to eliminate heat transfer from the motor to the operator's back. Molded-in back braces and adjustable shoulder straps and belts provide a comfortable and secure fit. A molded-in carrying handle adds to its ease of use.

## Packaged complete

Standard attachments include 2-piece aluminum wand, 4' smooth-core hose, and crevice, round dusting, upholstery, and 14" scalloped carpet tools. Belt holders allow convenient tool storage. For extra thick carpet, an optional 14" EZ-Glide carpet tool is available.

## Quad Filtration

Indoor air quality concerns can be erased with Tornado® Pro and Super Pro PAC VACs®. Both units provide 96.1% particulate containment down to 1 micron via a quad filtration system with a 2-ply Micro paper filter (A), a reusable Micro cloth bag (B), a motor intake filter (C), and a motor exhaust filter that also reduces sound levels (D). An optional micro filter is available for even higher efficiency (replaces C).

PRODUCT SPECIFICATIONS		
MODEL	PRO PAC VAC®	SUPER PRO PAC VAC®
CATALOG NUMBER	93020	93025
DIMENSIONS (W X H)	8" x 23"	9.75" x 24"
WEIGHT	9 LBS.	10.5 LBS.
MOTOR	1.5 HP	1.5 HP
CAPACITY	6 QUART	10 QUART
POWER	115V / 60Hz	115V / 60Hz
STATIC LIFT	100	100
CFM	150	150
STANDARD ACCESSORIES (Included with unit)
